

A unique approach to wound management

Triad is a sterile coating that can be applied anywhere, adheres to wet skin, and keeps the wound covered.

Wounds on **irregular surfaces**

Broken skin in the presence of incontinence

Maceration of peri-wound skin

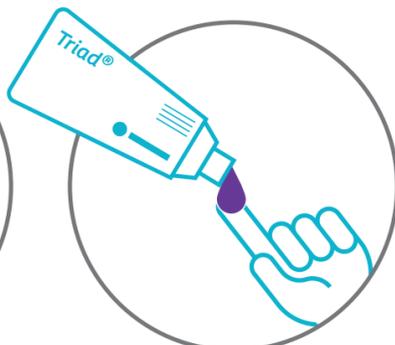

Necrotic tissue such as slough or eschar

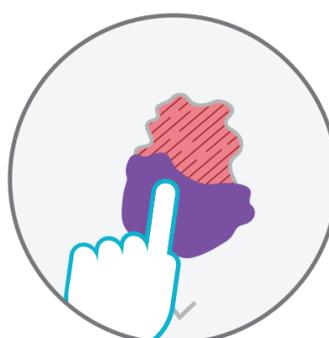

Triad application:

1. Always cleanse the wound before applying Triad.

2. Triad can be applied directly from the tube or by using a gloved finger.

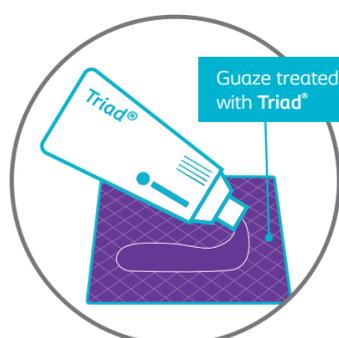

3. Gently spread Triad evenly over the area of application to the thickness of a dime.

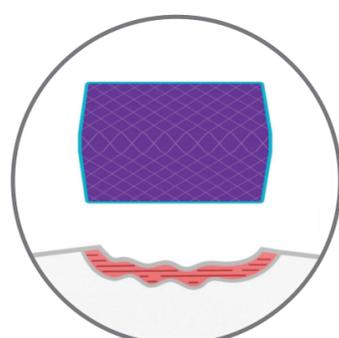

Because Triad is designed for use on wet and irregular surfaces it is **typically used on its own without a secondary dressing.**

Triad may not always dry completely and some light staining on bed linens or garments might occur.

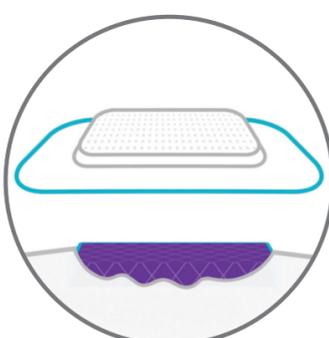

Triad on wounds with depth:

1. For wounds with depth, gauze impregnated with Triad may be used.

2. Fold or fluff the gauze to fit within the wound bed.

3. Cover the wound with a secondary dressing.

Triad instructions for use video:

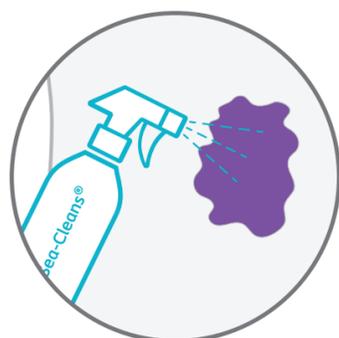

Scan or text below to view the video:

Scan QR code using your smart phone camera. Launch video by tapping the link that appears on your screen (not compatible with all smart phones).

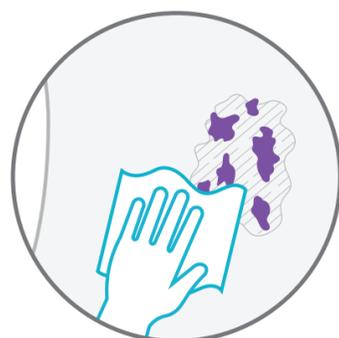

Or, text **94253** and enter keyword **"triad"** to view video.

Triad removal:

1. Use pH-balanced wound cleanser to soften Triad.

2. Gently wipe to remove without scrubbing.

3. For complete removal repeat as needed.

Triad can stay in place for **5-7 days**, with higher exudate levels requiring more frequent re-applications.

In the **perineal area**, reapply Triad after each episode of incontinence.

Ordering Information

Triad® Hydrophilic Wound Dressing

Code	Size	Units	HCPS Code
1964	2.5 oz. (71 g)	12	A6240
1967	6 oz. (170 g)	12	A6240

Sea-Cleans® Wound Cleanser

A pH balanced wound cleanser that can be used to remove Triad without scrubbing.

Code	Size	Units	HCPS Code
1063	6 fl. oz. (178 mL)	12	A6260
1067	12 fl. oz. (355 mL)	12	A6260

Triad is only sterile on first application.
